How does vaccine distribution relate to GDP?

The data in this file comes from "Our World in Data", and is updated daily.

Oh no. This data is a little bit messy! There are inconsistent numbers of rows for each country, there are missing values, and each country's final date is different.

Examining the relationship between vaccines and GDP

Let's create some plots just for the highest reported vaccine dose count for each country.

Here are some scatterplots. I encourage you to play with this yourself and make some other plots that might be interesting (e.g., the vaccines over time for different countries!)
